PIEZOSURGERY® TECHNIQUE

→ PIEZOSURGERY®
HAS DEFINED A
NEW DIMENSION
IN BONE SURGERY

- It's simple, stress-free and selective
- It increases the quality and success for you and your patients

Thanks to the controlled sophisticated ultrasound vibrations, the original PIEZOSURGERY® technique opens up a new age for osteotomy, osteoplasty and extraction in Implantology, Periodontology, Endodontics and Surgical Orthodontics.

- MICROMETRIC CUTS: optimal surgical precision and intra-operative sensitivity
- SELECTIVE CUTS: minimal damage to soft tissue, offering safety for you and your patients
- CAVITATION EFFECT: optimal intra-operative visibility and a blood-free surgical site
- HISTOLOGICAL ADVANTAGE: more favorable bone healing in osseointegration process

→ INSERT QUALITY

→ PRECISION

A CNC controlled 5-dimensional sharpening machine cuts with an accuracy of up to 0.01 mm. The whole cutting process for a single insert last up to 12 min.

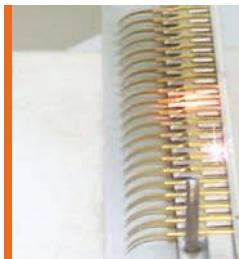

→ MATERIAL

mectron ultrasound inserts are built with medical grade, high quality, stainless steel.

→ HIGH END INSERTS FOR PROFESSIONALS

Each mectron ultrasound insert will pass through 12 working steps.

→ DIAMOND COATING

Depending on the indication, the inserts are coated with specially selected diamonds. The granulometry of the diamond coating is adapted to the respective treatment.

→ TITANIUM NITRIDE COATING

A coating of titanium nitride, applied to inserts which treat bone, increases the hardness of the surface, avoids corrosion and therefore increases working life.

→ LABELING

Each insert is gently labeled by a laser.

→ QUALITY CHECK

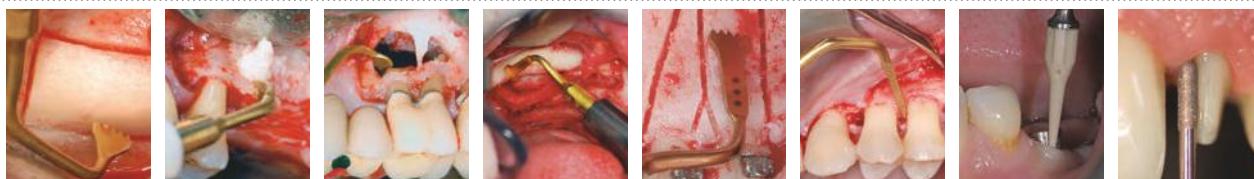

Each insert is checked in detail before getting an OK for the sales.

→ PIEZOELECTRIC LEVERS

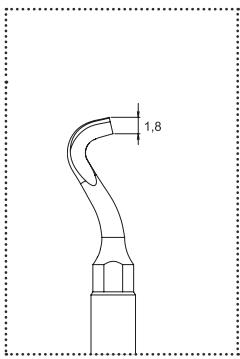

→ PIEZOELECTRIC INSTRUMENTS FOR THIRD MOLAR EXTRACTION

Piezoelectric extraction of the wisdom tooth involves a piezoelectric lever that amplifies the manually exerted mechanical force by adding the hammering effect typical of the Mectron PIEZOSURGERY®, with mechanical micro-vibrations that are produced by the over modulation of ultrasonic waves. This combination of macro/micro-mechanical forces is advantageous in many clinical situations as it facilitates luxation and even root extraction of the third molar, especially if impacted.

WARNINGS

DIAMOND-COATED INSERTS

When the diamond chips wear out a reduction in cutting capacity and a consequent increase in temperature may occur. Use these inserts for a maximum of ten applications.

CUTTING INSERTS

When the nitriding wears out the cutting edge loses efficiency and a re-sharpening is unadvisable due to its limited life-span.

MEMBRANE SEPARATORS

For a greater life-span it is recommended to use it on low power.
High power can be useful if there are residual bony edges to be removed.
